

SHRIMP MEAL TECHNICAL DATA SHEET

Nutritional advantages

Shrimp meal provides important nutrients such as protein, minerals (Ca, Mg, Na and K) and chitin. It is also rich in vitamin A and iron.

Product Application

It provides a natural flavor that increases attractiveness and improves digestion in the production of feed for aquaculture feeding, mainly in rations to produce feed for trout, tilapia, and salmon to give the proper color to the meat.

Storage and packaging

The product is packaged in polyethylene fiber bags and polypropylene bags of 25 kg and 50 kg. Storage is carried out in a cool and ventilated place.

Technical information

The companies with who we work have shrimp flour with the following characteristics:

Parameters	Shrimp head
Moisture %	< 11
Fat %	< 13
Protein %	40 – 48
Ash %	24-28
Histamine ppm	< 500
TVN (mg/100gr)	120
FFA %	10
Astaxanthin ppm min	150

Labelled

The labels are made based on customer requirements and the regulations of the destination countries.

Certifications

We work with producers that meet local and international standards for the production of shrimp meal
